SUMMARY

Data engineer with a strong SQL and pipeline foundation: ~3 years across Salesforce and Informatica building and maintaining **ETL/ELT pipelines on IDMC**, optimizing SQL/SAQL, and enforcing data quality for enterprise customers. **Native French, fluent English**. Solo, I built **RedPash**, a privacy-first data-quality platform — a Rust/Polars engine compiled to WebAssembly that processes 100k+ rows in-browser, with privacy enforced as a CI metric.

TECHNICAL SKILLS

- **Data Engineering** — advanced SQL & SAQL · ETL/ELT pipeline design · Informatica IDMC · data quality & governance · PostgreSQL · REST/GraphQL APIs
- **Languages & Compute** — Python · SQL (advanced) · Polars · WebAssembly · JavaScript
- **Cloud & Infra** — GCP (Compute Engine, Nginx) · OAuth2 · TLS · CI/CD · GDPR compliance
- **AI / LLM** — Claude · Model Context Protocol (MCP) · agent development · builds data tooling with Claude Code

SELECTED PROJECTS

RedPash — Founder, Architect & Orchestrator

github.com/doumouya/redpash-rust-pwa · Rust · Axum · Polars · WebAssembly · GlueSQL · PostgreSQL · MCP

↳ *Full deep-dive — architecture, the six-rebuild history, and a candid self-assessment:*

github.com/doumouya/redpash-rust-pwa/blob/main/docs/redpash-deep-dive.md

- **Compute-to-data architecture:** a privacy-first, full-stack data-quality PWA — the Polars engine compiles to WebAssembly and processes 100k+ rows entirely in-browser, so raw customer data never leaves the device.
- **A working data-quality engine:** ~18 cleaning operations as a replayable step list with undo/redo, automatic join detection across a project's files, a group-by / pivot / reporting engine, and a read-only SQL console (Polars SQLContext, multi-file joins).
- **Privacy-by-Design, enforced as a metric:** ran an internal GDPR audit (12 article-mapped findings), *encoded it as a CI analyzer* that turns privacy from a claim into a number (enforced count **11** → **2**), and shipped the fixes.
- **Framework-first design:** a data-driven object registry where declaring a new type is *a row, not a migration* — auto-wiring storage, CRUD, RBAC, and audit with zero new code (maintenance toward O(1)).
- **Velocity — "fail and iterate faster":** rebuilt the same idea through **six ground-up rewrites in ~6 weeks** (Streamlit → Django → Rust/WebAssembly), solo and part-time, each rewrite encoding the previous one's failures as automated guardrails.

Durabilis & Co — Technical Project Lead (Freelance) · Sep 2024 – Mar 2025

React · Tailwind · Django · PostgreSQL · REST & GraphQL · GCP · OAuth2 · TLS · GDPR

- Made the founding architecture call for a founder-led startup: **React** (so they could later leverage React Native for mobile) and **Django** (to match the in-house team's stack), under strict GDPR/TLS compliance.

- The **traditional (pre-AI) build baseline** — having shipped the same class of product both ways, I know concretely where an AI-agent workflow accelerates delivery and where it doesn't.

PROFESSIONAL EXPERIENCE

Technical Support Engineer — Informatica / Salesforce · Dublin · Sep 2025 – Present

- Technical advisor to enterprise customers' data-engineering teams: design and maintain complex ETL/ELT pipelines on Informatica IDMC; partner with clients to strengthen governance and operational performance.
- Deep root-cause analysis across distributed systems, REST/SOAP APIs, and database connectivity (JDBC/ODBC), ensuring data reliability for high-stakes environments.
- Author and optimize SQL for large-scale transformation, cleansing, and consolidation in customer workflows.

Technical Support Engineer — Sales Cloud, Salesforce · Dublin · Apr 2023 – May 2024

- Advised customer analytics teams on data-pipeline architecture and data-quality strategy across Sales Cloud, CRM Analytics, and external systems.
- Authored and optimized SQL & SAQL for dashboards and analytical models; improved data quality through validation, profiling, and automated correction.

Community Operations Analyst — Meta (via Covalen) · Dublin · Aug 2021 – Dec 2022

- Analyzed operational datasets to surface trends and anomalies, automated data-quality controls, and built reporting dashboards for global stakeholders.

EDUCATION

- **BSc in Applied Data Technologies** (*in progress — completing Nov 2027*) — Atlantic Technological University (ATU), Letterkenny.
- **Diploma in Mathematics (Distinction, QQI Level 5, 5N1833)** — Cork College of FET (Mallow Campus).
- **Associate Degree in Computer Science (credits toward the ATU BSc)** — University of the People.

CERTIFICATIONS

- **Informatica (IICS):** Cloud Data Integration · Cloud Application Integration · Cloud Data Integration & Replication · Cloud Data Governance & Catalog.
- **Salesforce:** Administrator · Platform App Builder · Platform Developer · Sales Cloud Consultant.

LANGUAGES

- **French** — C2, native (TEF Canada, 2024)
- **English** — C1 / IELTS 7.5 (2026)
